

rec.1 Primitive Recursion Notations

cmp:rec:not:
sec

One advantage to having the precise inductive description of the primitive recursive functions is that we can be systematic in describing them. For example, we can assign a “notation” to each such function, as follows. Use symbols zero, succ, and P_i^n for zero, successor, and the projections. Now suppose f is defined by composition from a k -place function h and n -place functions g_0, \dots, g_{k-1} , and we have assigned notations H, G_0, \dots, G_{k-1} to the latter functions. Then, using a new symbol $\text{Comp}_{k,n}$, we can denote the function f by $\text{Comp}_{k,n}[H, G_0, \dots, G_{k-1}]$. For the functions defined by primitive recursion, we can use analogous notations of the form $\text{Rec}_k[G, H]$, where $k+1$ is the arity of the function being defined. With this setup, we can denote the addition function by

$$\text{Rec}_2[P_0^1, \text{Comp}_{1,3}[\text{succ}, P_2^3]].$$

Having these notations sometimes proves useful.

Problem rec.1. Give the complete primitive recursive notation for mult.
