int.1 The λ-Definable Functions are Closed under Minimization

lam:int:min:sec

Lemma int.1. *Suppose $f(x, y)$ is primitive recursive. Let g be defined by*

$$g(x) \simeq \mu y\, f(x, y).$$

Then g is λ-definable.

Proof. The idea is roughly as follows. Given x, we will use the fixed-point lambda term Y to define a function $h_x(n)$ which searches for a y starting at n; then $g(x)$ is just $h_x(0)$. The function h_x can be expressed as the solution of a fixed-point equation:

$$h_x(n) \simeq \begin{cases} n & \text{if } f(x, n) = 0 \\ h_x(n+1) & \text{otherwise.} \end{cases}$$

Here are the details. Since f is primitive recursive, it is λ-defined by some term F. Remember that we also have a lambda term D, such that $D(M, N, \overline{0}) \twoheadrightarrow M$ and $D(M, N, \overline{1}) \twoheadrightarrow N$. Fixing x for the moment, to λ-define h_x we want to find a term H (depending on x) satisfying

$$H(\overline{n}) \equiv D(\overline{n}, H(S(\overline{n})), F(x, \overline{n})).$$

We can do this using the fixed-point term Y. First, let U be the term

$$\lambda h.\, \lambda z.\, D(z, (h(Sz)), F(x, z)),$$

and then let H be the term YU. Notice that the only free variable in H is x. Let us show that H satisfies the equation above.

By the definition of Y, we have

$$H = YU \equiv U(YU) = U(H).$$

In particular, for each natural number n, we have

$$\begin{aligned} H(\overline{n}) &\equiv U(H, \overline{n}) \\ &\twoheadrightarrow D(\overline{n}, H(S(\overline{n})), F(x, \overline{n})), \end{aligned}$$

as required. Notice that if you substitute a numeral $\overline{m}$ for x in the last line, the expression reduces to $\overline{n}$ if $F(\overline{m}, \overline{n})$ reduces to $\overline{0}$, and it reduces to $H(S(\overline{n}))$ if $F(\overline{m}, \overline{n})$ reduces to any other numeral.

To finish off the proof, let G be $\lambda x.\, H(\overline{0})$. Then G λ-defines g; in other words, for every m, $G(\overline{m})$ reduces to reduces to $\overline{g(m)}$, if $g(m)$ is defined, and has no normal form otherwise. □
