Lemma int.1. *The λ -definable functions are closed under composition.*

Proof. Suppose f is defined by composition from h, g_0, \dots, g_{k-1} . Assuming h, g_0, \dots, g_{k-1} are λ -defined by H, G_0, \dots, G_{k-1} , respectively, we need to find a term F that λ -defines f . But we can simply define F by

$$F(x_0, \dots, x_{l-1}) = H(G_0(x_0, \dots, x_{l-1}), \dots, G_{k-1}(x_0, \dots, x_{l-1})).$$

In other words, the language of the lambda calculus is well suited to represent composition. \square
